The UPC Data subgroup conducted blind analysis of undergraduate and graduate programs. The data considered does not include Missoula College or Mansfield Library; the subgroup agreed to address those units separately. The group ran several scenarios with the data to create pools of programs to submit to the deans and the president for further consideration.

After several run-throughs, we decided to move forward to the full UPC two scenarios: One that included all programs with below trend enrollment and above cost compared to Delaware benchmark data and a second that looked at those factors as well as budget impact and average research funds generated to achieve consensus on what to include in the pool. This anonymized list will be shared with the deans, interim provost, provost-elect and President for them to adjust and determine how programs align with the mission and identity.
