The Department of Mathematical Sciences requests that Math 152 (Calculus I), or any course for which it is a prerequisite, satisfy the symbolic systems requirement for majors in our department. We have already requested that Math 152 be a course that satisfies the symbolic systems requirement. We were not aware that we had to also make a request so that department could use it as the symbolic systems requirement.

Our intent is not to exempt all math majors from the foreign language requirement. We already have in place a departmental requirement that all math majors, except those in the secondary education option, either satisfy the Group III foreign language requirement or take two computer programming courses (from a list of approved courses) in Computer Science. Math education majors are exempted because of the number of other requirements they have in order to become certified.
