

# JUNE 20-22, 2018 NATIONAL GEOGRAPHIC GEO-INQUIRY SUMMER INSTITUTE

Are you a middle school teacher? Do you teach social studies/science, OR media/technology? The Montana Geographic Alliance is recruiting two teachers from the same school, one social studies/science and one media/technology, to join us for an interactive workshop on the National Geographic Geo-Inquiry Process.

The Geo-Inquiry Process is a five-step method designed to teach the skills necessary to think and reason geographically, and includes asking Geo-Inquiry Questions, acquiring geographic information, organizing and analyzing information, and using the information to answer Geo-Inquiry questions for informed action.
